1	2	(3)	4	5	(6)	(7)
MB[1]	**Clause No./ Subclause No./ Annex** (e.g. 3.1)	**Paragraph/ Figure/Table/ Note** (e.g. Table 1)	**Type of com-ment**[2]	**Comment (justification for change) by the MB**	**Proposed change by the MB**	**Secretariat observations** on each comment submitted

UK vote of disapproval

GB 0	All		te	UK vote of disapproval The UK National Body submits a vote of disapproval on ISO/IEC 16512-2/FPDAM 1 based on the following comments: **GB 6 – 10** relating to the group attribute and open and closed groups; these are related comments that apply to different parts of the specification and they need to be considered together; **GB 11 – 17** relating to the SECAGREQ, SECLIST and SECAGANS messages. These comments ask a series of questions that need to be answered before the drafting of additional revised text; comments GB 13 -17 are related to the general comments in GB 11-12; Addition of the new paragraph in **GB 53** relating to the Membership Authentication procedure; the proposed text has been provided to link the specification of this procedure to ISO/IEC 9798-3:1993. Satisfactory resolution of these comments will convert the UK vote to one of approval.		

General UK comments

GB 1	-----		ge	Synopsis This Amendment is nearing publication stage. The FPDAM ballot is the last stage where technical change can be considered within ISO/IEC and this will be followed by ITU-T consent. The ITU-T draft will then be

2 **Type of comment:** **ge** = general **te** = technical **ed** = editorial

NOTE Columns 1, 2, 4, 5 are compulsory.

1	2	(3)	4	5	(6)	(7)
MB[1]	**Clause No./ Subclause No./ Annex** (e.g. 3.1)	**Paragraph/ Figure/Table/ Note** (e.g. Table 1)	**Type of com-ment**[2]	**Comment (justification for change) by the MB**	**Proposed change by the MB**	**Secretariat observations** on each comment submitted
				balloted as an FDIS (confirmation of approval of the text at which no technical changes can be considered) before publication.		
GB 2	All	All tables	ge, ed	<u>Table renumbering</u> The tables in the FPDAM are numbered from Table 1 onwards. The published Amendment will require that the table numbering follows on from the table numbering of the published standard. The last table in the published standard is Table 8. We propose that the tables in the Amendment are renumbered starting from Table 9 (see next column)	Table numbers in the FPDAM are in black and proposed temporary table numbers are in red. 1 9, 2 10, 3 11, 4 12 5 13, 6 14, 7 15, 8 16 9 17, 10 18, 11 19, 12 20 13 21, 14 22, 15 23, 16 24, 17 25	
GB 3	All	All tables	ge, ed	<u>Conventions for table numbering</u> In order to avoid confusion, references to table numbers **in these comments** have the following form: Table ~~15~~ 23 where the figure in black with strikethrough is the figure number in the title of the table and the figure in red is the proposed table number in comment GB 2	This convention applies to the comments in this ballot response and **not** to the text of the Amendment.	
GB 4	All		ge, ed	<u>Co-ordination of projects</u> The progression of this Amendment must be considered in conjunction with the recent/current ballots on ISO/IEC 16512-2/D.Cor 1 and ISO/IEC 16512-2/PDAM 2. The Corrigendum adds two new code tables for node types and control data types which are essential for the operation of the standard. Amendment 2 adds or modifies several tables and figures to the base standard. The numbering of these tables and figures will affect the	The UK National Body proposes that the Tokyo meeting should concentrate on aligning the references in the text to the proposed numbers (in red) in comment GB 2. No attempt should be made to altering the table numbers in FPDAM 1 until the situation has been sorted out for Corrigendum 1 and Amendment 2. If any tables are deleted from the FPDAM the current number should be deleted and no attempt should be made to change the numbering of subsequent tables.	

1 **MB** = Member body (enter the ISO 3166 two-letter country code, e.g. CN for China; comments from the ISO/CS editing unit are identified by ******)

				numbering of the tables and figures in Amendment 1. The SC 6 meeting in Montreux agreed to number the new tables in the Corrigendum with bis and ter suffixes in an attempt to overcome the numbering problem. We now consider that it highly unlikely the ITU-T and ITTF editors will accept this solution. The SC 6 meeting in Tokyo, June 2009, must take this into account and plan a course of action to allow a consistent overall numbering of tables and figures. UK proposals for dealing with Amendment 1 are given in the adjacent column.	If further tables are added to the FPDAM they should be given temporary numbers of the form Table 17A, Table 17B (for new tables between the current Tables 17 and 18). This will give an unambiguous ordering. The same approach should be taken for figure numbers.	
GB 5	All	Tables and figures	ge, ed	Use of the ITU-T template. We make the following observations: a) there are inconsistencies in the style of clause and sub-clause headings at the same level; b) although there are cases where table and figure numbers have been tagged to maintain equivalence between their usage in the text and in the table and figure titles, there are many instances where this equivalence has not been maintained. Amendment 1 is nearing publication stage. At this stage it is important that no more errors are introduced in the referencing of clause, figure and table numbers.	When the changes to the Amendment have been made, the editor should ensure that the ITU-T template is used to produce correctly formatted clause and sub-clause headings and to keep the equivalence between table/figure numbers and references to them in the text. For the tables, this should be done so that there is consecutive numbering starting from Table 9 in the Amendment. If the ITU-T template is used properly there should be no difficulty in changing the numbering if further changes and made to Corrigendum 1 and Amendment 2. This action will save a lot of work at the TSB editing stage.

UK comments on the group attribute and open and closed groups

GB 6	3		te	Definitions related to open and closed groups The UK National Body considers that that there is insufficient definition of open and closed groups in Amendment 1. The UK submits proposed changes to the Definitions clause.	Add the following definitions to clause 3: *Individual sub-clause numbers for the definitions to be provided after all proposals for new definitions have been decided.*	

Table attached to comment GB 6:

group attribute (GP_ATTRIBUTE): an attribute that defines whether or not the Content Provider controls the admission of RMAs to the secure RMCP-2 session.

closed:

1. a value of the group attribute that indicates that a potential RMA is required to obtain a service user identifier from the Content Provider before subscribing to the secure RMCP-2 session.
2. description of an MM group in which all the RMAs have been allocated a service user identifier from the Content Provider before subscribing to the secure RMCP-2 session.

open:

1. a value of the group attribute that indicates that a potential RMA can subscribe to the secure RMCP-2 session without the possession of a server user identifier.
2. description of an MM group in which none of the RMAs have required a service user identifier before subscribing to the secure RMCP-2 session.

1 **MB** = Member body (enter the ISO 3166 two-letter country code, e.g. CN for China; comments from the ISO/CS editing unit are identified by ******)

2 **Type of comment:** **ge** = general **te** = technical **ed** = editorial

NOTE Columns 1, 2, 4, 5 are compulsory.

1	2	(3)	4	5	(6)	(7)
MB[1]	**Clause No./ Subclause No./ Annex** (e.g. 3.1)	**Paragraph/ Figure/Table/ Note** (e.g. Table 1)	**Type of com-ment**[2]	**Comment (justification for change) by the MB**	**Proposed change by the MB**	**Secretariat observations** on each comment submitted
GB 7	12.3	Table 19	ed, te	Changes to GP_ATTRIBUTE columns in Table ~~11~~ 19 We suggest that the 'Meaning' column should be into 'Attribute' and 'Meaning' columns (as has been done for Tables ~~8~~ 16 and ~~9~~ 17. Specific references to ISO/IEC standards require to be added to the References column.	Proposal for a revised table 19 is indicated below	

Table attached to comment GB 7:

Table 19 – GP_ATTRIBUTE Codes

Code	Attribute	Meaning
0x01	OPEN	A service user identifier is not required by an RMA before subscribing to the secure RMCP-2 session (see 10.1.1.5)
0x02	CLOSED	A service user identifier is required by an RMA before subscribing to the secure RMCP-2 session (see 10.1.1.5)

GB 8	10.11.4		te	Admission control for RMAs The admission control for RMAs needs to be described separately for open and for closed groups.	Split 10.1.1.4, 'Admission of RMAs' into two sub-clauses as indicated in the text below:	

Text attached to comment GB 8:

10.1.1.4 Admission of RMAs to open groups

A potential RMA will know from the announcement of the session whether or not the session supports open groups. The RMAs are authenticated by the SM through the TLS session and they join the session through the exchange of SUBSREQ and SUBSANS messages with the SM. They do not receive the session key Ks. They join the RMCP-2 tree through the secure tree join procedure (see 10.2.4).

10.1.1.5 Admission of RMAs to closed groups.

1 **MB** = Member body (enter the ISO 3166 two-letter country code, e.g. CN for China; comments from the ISO/CS editing unit are identified by ******)

2 **Type of comment:** **ge** = general **te** = technical **ed** = editorial

NOTE Columns 1, 2, 4, 5 are compulsory.

1	2	(3)	4	5	(6)	(7)
MB[1]	**Clause No./ Subclause No./ Annex** (e.g. 3.1)	**Paragraph/ Figure/Table/ Note** (e.g. Table 1)	**Type of com-ment**[2]	**Comment (justification for change) by the MB**	**Proposed change by the MB**	**Secretariat observations** on each comment submitted

A potential RMA will know from the announcement of the session whether or not the session supports closed groups. Access to membership of closed groups is controlled by the content provider (CP). A potential RMA requests a service user identifier from the CP. The CP provides a service user identifier to the potential RMA and also sends the service user identifier, without revealing the identity of the potential RMA, to the SM. The CP is responsible for the format of this identifier and this is not defined in this Recommendation | International Standard.

When the session is opened to RMAs, the RMAs are authenticated by the SM through the TLS session and they join the session through the exchange of SUBSREQ and SUBSANS messages with the SM. The SUBSREQ message shall contain the service user identifier. The SM shall send a rejection in the RESULT control data type of the SUBANS message if the SM does not hold an identical service user identifier.

The RMAs do not receive the session key Ks. They join the RMCP-2 tree through the secure tree join procedure.

GB 9	10.2.9 (new)		te	Service user identifier In order for an RMA to submit a service user identifier to the SM a new control will be required for the SUBSREQ message. Question. Is 16 bits sufficient for the service user identifier? It will allow for 65536 numeric entries. This will be reduced if alphabetic characters are included. The format of this identifier is outside of the scope of this standard.	Suggested text for a new SERV_USER_IDENTIFIER control for the SUBSREQ message for secure RMCP-2 is provided below. The format is based on the AUTH control for the RELREQ message for secure RMCP-2. *A provisional sub-clause number, 11.2.9, has been given for the SUBSREQ message for secure RMCP-2 following the specification of the message format. A more appropriate position would be for it to appear before 11.2.1, RELREQ message, but it recommended that it is not moved until the final editing of the revised FPDAM text.* *A new Figure 122A has been added. Again, it is recommended that it is not renumbered until the final editing of the revised FPDAM text.*	

1 **MB** = Member body (enter the ISO 3166 two-letter country code, e.g. CN for China; comments from the ISO/CS editing unit are identified by ******)

2 **Type of comment:** **ge** = general **te** = technical **ed** = editorial

NOTE Columns 1, 2, 4, 5 are compulsory.

1	2	(3)	4	5	(6)	(7)
MB[1]	**Clause No./ Subclause No./ Annex** (e.g. 3.1)	**Paragraph/ Figure/Table/ Note** (e.g. Table 1)	**Type of com-ment**[2]	**Comment (justification for change) by the MB**	**Proposed change by the MB**	**Secretariat observations** on each comment submitted

Text attached to comment GB 9:

10.2.9. SUBSREQ message

10.2.9.1. The SUBSREQ message for RMCP-2 is defined in 7.3.1 and its common format fields are shown in Figure 40. For use in secure RMCP-2 the following common format fields in the SUBSREQ message shall be set as indicated below:

a) *Version*. This field denotes the current version of RMCP-2. Its value shall be set to 0x04.

b) *Node Type*. This field denotes the message issuer's node type. Its value shall be set to one of SMA, DMA or RMA coded as in Table 12. When the SERV_USER_IDENT control is appended, the Node Type value shall be set to 0x03 (RMA).

The remaining common format fields for SUBSREQ messages shall be as specified in 7.3.8.

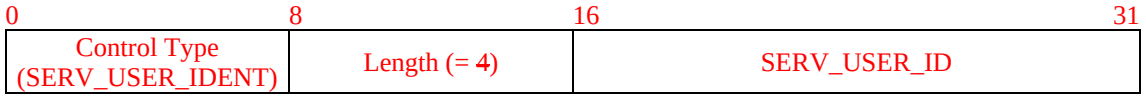

Figure 122A– SERV_USER_IDENT control data

10.2.9.2. This sub-clause defines an additional SERV_USER_IDENT control type for use in secure RMCP-2 in order to confirm that the RMA issuing the SUBSREQ message has been registered by the Content Provider for participation in closed groups (see 10.1.1.5). The SERV_USER_IDENT control type shall be used only when the RMA wishes to join a session in which the MM groups are defined as closed. Figure 122A shows the format of the SERV_USER_IDENT control type. The description of each field is as follows:

- SERV_USER_IDENT
  - a) *Control type* – denotes 'SERV_USER_IDENT' control. Its value shall be set to 0x1E (see Table 14)
  - b) *Length* – denotes the length of the SERV_USER_IDENT control in bytes. Its value shall be set to 0x04.

1 **MB** = Member body (enter the ISO 3166 two-letter country code, e.g. CN for China; comments from the ISO/CS editing unit are identified by ******)
2 **Type of comment:** **ge** = general **te** = technical **ed** = editorial
NOTE Columns 1, 2, 4, 5 are compulsory.

GB 12	11.2.3 11.2.4 11.2.5		te	<u>Questions relating to attributes in SECAGREQ, SECLIST and SECAGANS messages</u> We consider that a number of improvements should be made to the message formats for the SECAGREQ, SECLIST and SECAGANS messages in order to improve the consistency of the specification. The following questions need to be answered before drafting the text for these improvements.		

<u>Text attached to comment GB 12</u>

SECAGREQ messages

a) The values of the SEC_NAME attributes are the same as for the GK_NAME attributes but with the addition of the MEM_AUTH attribute. Is the choice of the MEM_AUTH required in this list of values? The use of MEM_AUTH is a mandatory part of secure RMCP-2 and it does not fit easily with the PREFER options of the SEC_NAME attributes.

1 **MB** = Member body (enter the ISO 3166 two-letter country code, e.g. CN for China; comments from the ISO/CS editing unit are identified by ******)
2 **Type of comment:** **ge** = general **te** = technical **ed** = editorial
NOTE Columns 1, 2, 4, 5 are compulsory.

1	2	(3)	4	5	(6)	(7)
MB[1]	**Clause No./ Subclause No./ Annex** (e.g. 3.1)	**Paragraph/ Figure/Table/ Note** (e.g. Table 1)	**Type of com-ment**[2]	**Comment (justification for change) by the MB**	**Proposed change by the MB**	**Secretariat observations** on each comment submitted

NOTE – This action will remove the anomaly that MEM_AUTH is coded 0x07 in the SEC_NAME and 0x01 in AUTH_NAME.

b) If MEM_AUTH is removed from the SEC_NAME values, could the SEC_NAME attribute be renamed as the GK_NAME attribute (the range of values will the same)? In this case, Table ~~8~~ 16 could be removed from clause 12 and reference made to Table ~~13~~ 21.

c) Do the PREFER values in the EN_DEC_ALG control relate to the EN_DEC_ID attributes for both the CON_EN_DEC_ALG and GK_EN_DEC_ALG controls? If so, does this mean that the same algorithm will be chosen for both controls?

SECLIST message

d) Are we correct in assuming that the GP_ATTRIBUTE is decided before the RMAs join the session (see comment GB 8)? The 'CLOSED' value is decided when the CP issues the notice of the session (see the UK proposal in comment GB 6). This means that this value is non-negotiable, but it remains an important part of the session profile in the SECLIST.

e) At what stage is the value of the GK_MECHA decided? Is it dependent on the GK_NAME attribute? Is this a value that could be decided by the SM and/or the CP before the DMAs join the session?

f) Are we correct in assuming that the AUTH_NAME attribute has a single value (MEM_AUTH) since the TESLA value was removed from Table ~~15~~ 23?

g) Are we also correct in assuming that the AUTH_ATTRIBUTE is related to the AUTH_NAME attribute and that this will have a single value (MEMBERSHIP)? This means that both attributes are invariant, defined by the specification. They are therefore non-negotiable and remain an important part of the session profile in the SECLIST.

h) Is the CON_EN_DEC_ALG attribute decided by the CP when obtaining approval for the session? The CP has an interest in the secure transmission of the content to the end-user and it is only relayed between the intermediate MAs. From this point of view it is independent of the GK_EN_DEC_ALG.

i) Are we correct in assuming that the AUTH_ALG control and its AUTH_ID attribute should be added to the SECLIST?

SECAGANS message

j) Are we correct in assuming that the GP_ATTRIB, GK_MECHA and AUTH_ATTRIB do not require the download of any algorithms and that they do not need to be included in the SECAGANS message?

1 **MB** = Member body (enter the ISO 3166 two-letter country code, e.g. CN for China; comments from the ISO/CS editing unit are identified by ******)

GB 26	9.5	Paragraphs 3 and 4	ed, te	Regional security management Paragraph 3 should be split into two paragraphs, one for the MM region and one for MM groups. The MM region may have several Kg keys, one for each MM group. The first sentence in the original text should define the region in terms of group keys, not the group key. A new sentence should be added to the proposed second paragraph to cover multicast-disabled MM groups. A further sentence should be added to state that the RMAs are logically connected direct to their parent DMA on the data delivery tree (Rationale: This is to cover the case where for local area networks, the physical connection 9.5from the RMA may not be direct to the DMA)		

This text is attached to comment UK 26

Proposed replacement text in sub-clause 9.5:

The MM region is a management zone ~~of the group key (Kg)~~ defined by the use of group keys (Kg). The MM region consists of DMAs and RMAs. They can be connected over a multicast-enabled or a multicast-disabled network. The MM region consists of one or more MM groups each using its own Kg group key.

Multicast-enabled MM groups consist of an HMA, one or more candidate HMAs and multiple RMAs that receive the same multicast messages. Candidate HMAs are DMAs that are not connected to the data delivery tree, but have the capability to assume the role of HMA if required. Multicast-disabled MM groups consist of one DMA and multiple RMAs. In both cases the RMAs are logically connected direct to their parent DMA on the data delivery tree.

Any change in an MM group is localized ~~in~~ within the scope of its own MM group

				specify the information that the SM must send to the DMA, does is specify the information that the DMA must hold, or is it a statement of fact indicating that the DMA might not have a complete list (because it has not carried out a poll for some time)? Does a DMA have to the power to reject an application from an RMA to join its MM group if that RMA is not listed in the ACL? If so, the DMA needs a complete up to date list. If not, what is the purpose of the DMA holding the list? What is the significance of the DMA having an ACL of 'some of the RMAs in its own MM group'? The DMA must know the members of its own group as it shares a K_{MAS} with each of the members of its group.		
GB 30	10.2.1.1	Second paragraph	ed, te	Incorrect table reference	10.2.1.1. Second paragraph Change text as indicated: *Kg* is updated by the DMA or RMA according to the update conditions selected ~~during the agreement of group key mechanisms~~ for the security policy ~~(see Table 14)~~ (see Table ~~12~~ 20).	
GB 31	10.2.3		ed, te	Incorrect correct cross reference to Annex E Membership authentication is defined in Annex E, not Annex F	10.2.3. Second paragraph delete 'Annex F', insert 'Annex E'	
GB 32	10.2.3		te	Membership authentication for joining RMCP tree The changes to Tables ~~14~~ 22 and ~~15~~ 23 should be reflected in 10.2.3, Membership authentication for joining RMCP tree. The word 'proposed' is inappropriate as there is no alternative authentication mechanism	10.2.3. Third paragraph. Second sentence delete 'with the proposed authentication mechanism', insert 'confirming the use of the membership authentication mechanism defined in Annex E.

				The referenced action is mandatory if the recipient is a DMA. The action in the last paragraph follows on directly from the last sentence of the previous paragraph and it should not be separated in a new paragraph.	10.2.3. Third paragraph. Last sentence. Delete 'includes', insert 'shall include' 10.2.3. Last paragraph. Move this sentence to the third paragraph to follow the current text of that paragraph.	
GB 33	10.2.4	Paragraph 2	ed, te	Secure tree join Missing Figure number and updated table references are required.	Proposed replacement text indicated below. Minor modifications to the text have been included.	

This text is attached to comment GB 33

Proposed replacement text for paragraph 2 of 10.2.4

The tree join procedure is illustrated in Figure 100. Membership authentication (see 10.2.3) and group key distribution are processed. When the group key update is required (as indicated by the GK_MECHA attribute selected for the security policy; see Table ~~12~~ 20), the parent DMA (see note) of the RMA joining the tree re-creates and distributes the group key to its RMAs using the GK_NAME mechanism selected for the security policy (see Table ~~13~~ 21).

NOTE – In the case of a multicast-enabled group the parent DMA will be the HMA.

GB 34	10.2.5.2		te	Question: Use of LEAVREQ and HLEAVE messages HLEAVE in basic RMCP-2 is sent by the HMA to its children MAs because any of its children can become an HMA. In Leave of HMA from a multicast-enabled area (10.2.5.2) the HMA sends a LEAVREQ followed by an HLEAVE to its children.	The proposed replacement text for 10.2.5.2. attached to comment GB 38 assumes that the HLEAVE is only sent to Candidate HMAs.

NOTE Columns 1, 2, 4, 5 are compulsory.

1	2	(3)	4	5	(6)	(7)
MB[1]	**Clause No./ Subclause No./ Annex** (e.g. 3.1)	**Paragraph/ Figure/Table/ Note** (e.g. Table 1)	**Type of com-ment**[2]	**Comment (justification for change) by the MB**	**Proposed change by the MB**	**Secretariat observations** on each comment submitted
				Is the sending of the HLEAVE to the children of the HMA necessary? The reason for the HMA leaving has already been sent in the LEAVEREQ and the remaining control types are concerned with data required by the candidate HMAs. Should sending of the HLEAVE be restricted to candidate HMAs?		
GB 35	10.2.5.2		ed	Leave of HMA from a multicast-enabled area The two paragraphs in 10.2.5.2 look like two separate attempts to describe the same procedure, one in general terms and one referencing specific RMAs. In both cases, several minor English language changes are required	Proposed replacement text based on the general description but with the HLEAVE being sent only to candidate HMAs (see comment GB 37) is indicated below. Minor changes have been made to improve the English	

This text is attached to comment GB 35

Proposed replacement text for 20.2.5.2.

Figure 102 illustrates the HMA leave procedure. The HMA issues a leave request to its members, and announces the leave to its candidate HMAs. The successful candidate HMA joins the RMCP-2 tree and announces its existence to the RMAs in its MM group. The RMAs request to re-join tree and perform membership authentication with the new HMA. The RMAs are the able to receive multicast data normally from the new HMA, and the old HMA leaves the RMCP-2 tree.

GB 36	10.2.5.2	Figure 102	te	Corrections to Figure 102 If the recipients of HLEAVE message are restricted to Candidate HMAs (see comment GB 38), the issue of HLEAVEs to RMAs should be removed from Figure 102. There are no LEAVANS messages in response to the LEAVREQ messages in Figure 102. Should these be added to the figure?		

1 **MB** = Member body (enter the ISO 3166 two-letter country code, e.g. CN for China; comments from the ISO/CS editing unit are identified by ******)

2 **Type of comment:** **ge** = general **te** = technical **ed** = editorial

NOTE Columns 1, 2, 4, 5 are compulsory.

1	2	(3)	4	5	(6)	(7)
MB[1]	**Clause No./ Subclause No./ Annex** (e.g. 3.1)	**Paragraph/ Figure/Table/ Note** (e.g. Table 1)	**Type of com-ment**[2]	**Comment (justification for change) by the MB**	**Proposed change by the MB**	**Secretariat observations** on each comment submitted
GB 36	10.2.7	Figure 104	te	Question: Meaning of subscript suffixes in Figure 104 Do the subscript suffixes 'a' and 'b' in $E(Kc)_{Kg\_a}$, $D(Kc)_{Kg\_a}$, $E(Kc)_{Kg\_b}$ and $D(Kc)_{Kg\_b}$, in Figure 104 refer to separate Kg keys belonging to different DMAs?	If the answer to the question is yes: add the following sentence to the end of the text following the Title of Figure 104. 'The suffixes $_{Kg\_a}$ and $_{Kg\_b}$ are used to distinguish different group keys used in separate MM groups.'	
GB 37	10.2.7	Figure 104	ed	Legibility of Figure 104 The subscript suffixes in Figure 104 are difficult to read in printed copies of the FPDAM text and in the electronic version (without zoom to X2).	Prepare new figure with more legible text. *This can probably be left to TSB when they prepare the final text before publication.*	

Additional UK comments on clause 11, Format of secure RMCP-2 messages

GB 38	11.2.3.4.c		te	AUTH_ALG control type The AUTH_ID parameter denotes the hash/MAC algorithm.	Change the AUTH_ID field definition to read: '*AUTH_ID* – denotes the proposed hash/MAC algorithm. Its value shall be set to one of the code values in Table ~~10~~ 18.'	
GB 39	1.2.4.4.	Figure 114	ed	CON_EN_DEC_ALG control type	In Figure 114 change 'EN_DEC_OID' to 'EN_DEC_ID' In the text of 11.2.4.4 change 'CONTENTS_EN_DEC_ALG' to 'CON_EN_DEC_ALG' (Four instances) In 11.2.4.4.b insert 'denotes' between '*Length* – ' and 'the proposed'	
GB 40	11.2.5.1.g		ed	SEGANS control data	Modify the first sentence in 11.2.5.1.g: 'The control data shall include the SEC_RETURN field ~~shall be added~~.'	

1 **MB** = Member body (enter the ISO 3166 two-letter country code, e.g. CN for China; comments from the ISO/CS editing unit are identified by ******)

2 **Type of comment:** **ge** = general **te** = technical **ed** = editorial

NOTE Columns 1, 2, 4, 5 are compulsory.

1	2	(3)	4	5	(6)	(7)
MB[1]	**Clause No./ Subclause No./ Annex** (e.g. 3.1)	**Paragraph/ Figure/Table/ Note** (e.g. Table 1)	**Type of com-ment**[2]	**Comment (justification for change) by the MB**	**Proposed change by the MB**	**Secretariat observations** on each comment submitted
GB 41	11.2.5.3		ed	SEGANS failed configuration of security mechanisms Our replacement text may have to be modified in response to answers to the questions in comment GB 12	Replace the first sentence with: 'If in response to the SECLIST message, the configuration of any of the security mechanisms has failed (see 10.1.4.1 and 10.1.4.2), the control data types corresponding to the failed mechanisms shall be included in the SECAGANS message. Their values shall be identical to the equivalent control data types in the SECLIST message (see 11.2.4).' Rationale: This is more explicit than the current text.	
GB 42	11.2.6.2.d		ed, te	KEY_INFO control type	Delete item d). This is no longer required as the control data and the sub-control data have been merged into a single figure.	

Additional UK comments on clause 12, Parameters

GB 43	12.3	Table ~~6~~ 14	ed, te	Control data types For consistency ENDEC should be replaced by EN_DEC KEY_INFO should be used to maintain alignment with the message format specifications in Clause 11. This will also eliminate confusion with the KEY_MATERIAL sub-clause in Table 15 (and in Clause 11)	In the Control Data Type column Change 'ENDEC_ALG' to 'EN_DEC_ALG' Change 'CON_ENDEC_ALG' to 'CON_EN_DEC_ALG' Change 'GK_ENDEC_ALG' to 'GK_EN_DEC_ALG' Change 'KEY_MATERIAL' to 'KEY_INFO' In the Meaning column Change 'Key material' to 'Key information'	

1 **MB** = Member body (enter the ISO 3166 two-letter country code, e.g. CN for China; comments from the ISO/CS editing unit are identified by ******)
2 **Type of comment:** **ge** = general **te** = technical **ed** = editorial
NOTE Columns 1, 2, 4, 5 are compulsory.

1	2	(3)	4	5	(6)	(7)
MB[1]	**Clause No./ Subclause No./ Annex** (e.g. 3.1)	**Paragraph/ Figure/Table/ Note** (e.g. Table 1)	**Type of com-ment**[2]	**Comment (justification for change) by the MB**	**Proposed change by the MB**	**Secretariat observations** on each comment submitted
GB 44	12.3	Table ~~7~~ 15	ed, te	Sub-control data types	Delete the table entry for AUTH_INFO. (Rationale: This sub-control has been deleted from the RELREQ message). In the final column, change 'REL_ANS' to 'RELANS'	
GB 45	12.4	Tables ~~9~~ 17 and ~~10~~ 18	ed	EN_DEC ID codes (Title) Change table titles to align with changed parameter names EN_DEC_ID (in Figure 109 and 11.2.3.3.c) and AUTH_ID (in Figure 110 and 11.2.3.4.c). The tables are referenced from 11.2.3.3.c and 11.2.3.4.c	Table ~~9~~ 17. In the Title delete 'EN_DEC_ALG codes', insert 'EN_DEC_ID codes' Table ~~10~~ 18. In the Title delete 'AUTH_ALG codes', insert 'AUTH_ID codes'	
GB 46	12.4	Table ~~9~~ 17	ed, te	EN_DEC ID codes (1x01, 1x02,1x03) Question. Are the other modes defined by the SM for 1x01, 1x02 and 1x03 restricted to choices from ISO/IEC 18033-3?	Editorial comment: In the Meaning column, change entries for 1x01, 1x02 and 1x03 to 'Values greater than 1x00 are reserved for other modes of AES and Triple DES defined by the SM'	
GB 47	12.4	Table ~~10~~ 18	ed	AUTH ALG codes We suggest that the 'Meaning' column should be split into 'Acronym' and 'Meaning' columns as in Tables ~~8~~ 16 and ~~9~~ 17 The correct ISO/IEC references also need to be added.	Proposed changes are shown below	

1 **MB** = Member body (enter the ISO 3166 two-letter country code, e.g. CN for China; comments from the ISO/CS editing unit are identified by ******)

2 **Type of comment:** **ge** = general **te** = technical **ed** = editorial

NOTE Columns 1, 2, 4, 5 are compulsory.

1	2	(3)	4	5	(6)	(7)
MB[1]	**Clause No./ Subclause No./ Annex** (e.g. 3.1)	**Paragraph/ Figure/Table/ Note** (e.g. Table 1)	**Type of com-ment**[2]	**Comment (justification for change) by the MB**	**Proposed change by the MB**	**Secretariat observations** on each comment submitted

This table is attached to comment GB 47

Table 18 – AUTH_ID Codes

Code	Acronym	Meaning	Reference
0x01	HMAC-SHA1	Hash Message Authentication Code – US Secure Hash Algorithm 1	ISO/IEC xxxxx
0x02	HMAC-MD5	Hash Message Authentication Code – Message-Digest Algorithm 5	ISO/IEC xxxxx
0x03	MD5	Message-Digest Algorithm 5	ISO/IEC xxxxx

GB 48	12.4	Table ~~12~~ 20	te	GK_MECHA codes An earlier version of the Amendment contained only the first four values in this table and indicated that additional code values could be expressed in terms of arithmetical combinations of these values. This concept could still be applied if a code value of 0x04 was allocated to FORWARD and 0x03 to PERIODIC+ BACKWARD. This would constitute a more logical allocation of codes.	Reallocation of codes 0x04 FORWARD 0x03 PERIODIC+BACKWARD Editorial comment in entry for FORWARD Change text to read 'whenever any member j~~oin~~ joins the group'	
GB 49	~~12.4~~ 12.5		ed	New sub-clause 12.5 Sub-clause 12.4 is titled 'Code values related to the RMCP-2 security policy'. Tables ~~16~~ 24 and ~~17~~ 25 do not define the security policy. They should be separated into a new sub-clause 12.5.	Create a new sub-clause for tables Tables ~~16~~ 24 and ~~17~~ 25: **12.5 Miscellaneous code values**	

1 **MB** = Member body (enter the ISO 3166 two-letter country code, e.g. CN for China; comments from the ISO/CS editing unit are identified by ******)

2 **Type of comment:** **ge** = general **te** = technical **ed** = editorial

NOTE Columns 1, 2, 4, 5 are compulsory.

1	2	(3)	4	5	(6)	(7)
MB[1]	**Clause No./ Subclause No./ Annex** (e.g. 3.1)	**Paragraph/ Figure/Table/ Note** (e.g. Table 1)	**Type of com-ment**[2]	**Comment (justification for change) by the MB**	**Proposed change by the MB**	**Secretariat observations** on each comment submitted
GB 50	~~12.4~~ 12.5	Table ~~16~~ 24	ed	SEC_RETURN codes These codes also apply to Auth_result codes.	Change Title to read 'SEC_RETURN and Auth_result Codes' In the entry for 0x04 change 'FAIDED' to 'FAILED'; change 'SEGANS' to SECAGANS'.	
GB 51	~~12.4~~ 12.5	Table ~~19~~ 25	ed, te	KEY_TYPE codes	In the Meaning column delete the word 'material' in all three lines (Rationale: the entry refers to the type of key; we think 'material' may be taken to imply material for generating the key and which will be transmitted in another field).	

UK comments on Annex E, Membership authentication mechanism and comments on authentication in other clauses

GB 52	Annex E		te, ed,	Membership authentication The terms 'member authentication' and 'membership authentication' are both used for the same procedure. 'Membership authentication' occurs in clauses 1, 9.2.3, 10.1.1.1, 10.2.1.1, 10.2.1.3, 10.2.3, 10.2.4, 10.2.5.2, 10.2.5.3, 11.2.1.2, 11.2.2.2 and E.2, tables ~~1~~ 9, ~~2~~ 10,~~8~~ 16, ~~15~~ 23 and E.1, figures 100, 102 and 103 'Member authentication' occurs only in Annex E. We propose replacement of 'member authentication' by 'membership authentication' on the grounds that 'membership authentication' is used more frequently.	Replace 'member authentication' by 'membership authentication' in -- the title of Annex E -- the text of E.1 (one occurrence) -- the title of figure E.1 -- the title of figure E.2	

1 **MB** = Member body (enter the ISO 3166 two-letter country code, e.g. CN for China; comments from the ISO/CS editing unit are identified by ******)
2 **Type of comment:** **ge** = general **te** = technical **ed** = editorial
