

**France National Body contribution on documents N 9608, Recommendations ISO/IEC JTC1 SWG ARM meeting**

Regarding document JTC1 N9608, Recommendations ISO/IEC JTC1 SWG ARM meeting, the French National Body has the following comments:

- We would like to thank the SWG-ARM participants for their work.
- We understand that the scope of this group is to study archival of registered documents (i.e., documents with an N number) within JTC1 and its SCs including all kinds of advisory, ad-hoc or working groups.
- The French NB wants to stress the importance, for JTC1, SCs and WGs, to register and number all documents presented in a meeting or in between meetings. Registering documents ensures that the conditions for submission and availability of these documents are being met and that their unique identification is guaranteed by the sequential and chronological order of the register. These registered documents may include presentations to a group, and it is recommended that the SWG-ARM applies this recommendation to its documents.

The French NB would like the requirements of the last two bullets formally recorded by JTC 1 (e.g., in the form of a resolution).
