France National Body contribution on documents N 9783, SGSN Convenor's presentation at the 2009 JTC 1 Plenary meeting (recommendation to JTC 1 on page 18)

The French NB acknowledges the work of the SGSN and considers it fulfilled its ToRs. FNB agrees on the fact that Sensor networks is a topic with a wide span that needs to interlock the work of a large number of existing SCs.

FNB considers that the high value of the SGSN work comes from the good and effective coordination performed with the collaborating SCs and the way their work was taken into account. The input of external bodies was also taken into account and prevented duplication of work, giving JTC1 a leading part to play in the international standardization arena.

Considering the future work on Sensor Networks, FNB believes that the substance of the topic of SN with its promising applications deserves the work on SN to be continued in a permanent way within a stable structure.

Seeking which structure would be the best, FNB wishes to share the following considerations:

- FNB reviewed the report of SG SN to JTC1 (N9782) and noted it did not identify any standardization area that does not fit within the scope of an existing SC. Furthermore, it does not propose any new standardization work that would generate the need of a new SC or a new structure. The same occurs in the Technical Document V.3 (N9756).
- FNB favours the different pieces of the work to be done where the expertise stands, that is within the SCs rather than in a new group that would infringe on the work already in the scope of the existing SCs..
- FNB considers that it is critical to organize an effective coordination of SCs work.

On the basis of these considerations, FNB does not favour the creation of a WG under JTC1 and rather proposes to let the work within the existing SCs as identified in N9782 answer to ToR 5. FNB proposes different options for coordinating the work:

- option 1(preferred): for each specific standardization area, delegate the coordination task to the relevant SC.
- option 2: create a SWG as a permanent follower of the SGSN in order to coordinate the work and identify new standardization needs not yet covered by the SCs nor the external standardization bodies
- option 3: renew the SGSN for another one year term.
